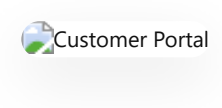
Hyve Beauty - Platform Delivery & Walkthrough

Welcome to the ultimate SaaS salon management platform. We have successfully designed, built, and polished a fully responsive, enterprise-grade salon management system tailored for your business.

📸 1. Ultra-Premium Digital Storefront

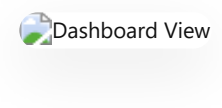
The customer-facing portal employs modern glassmorphism, fluid animations (`tailwindcss-animate`), and an elegant responsive layout to guarantee a premium first impression.



- **Unified Flow:** Customers can frictionlessly browse top-tier services, retail products, and manage their bookings without feeling overwhelmed.
- **Smart Bot Widget:** A floating AI Assistant is globally available to capture leads and direct customers to key endpoints instantly.

🛠️ 2. The Customer Dashboard

We replaced cluttered navigation with a flawless **Tabbed Experience** for logged-in customers.



- **Overview:** An upscale greeting card showcasing Loyalty Status (VIP/Gold) and cumulative visits, featuring immediate call-to-action buttons.
- **My Bookings:** An isolated itinerary view tracing historical and upcoming appointments. Real-time status badges (Confirmed, Completed, Cancelled) keep the customer informed.
- **My Invoices:** A dedicated financial ledger displaying detailed past transactions with immediate "PAID" assurances.

🔐 3. The Backend Engine

Underneath the hood lies a high-performance **Java Spring Boot API**, orchestrating all data seamlessly.

- **Dynamic Data Sync:** Every customer registering through the portal is immediately tied exclusively to your Salon (`getCurrentSalon()`).
- **Complete Admin Panel:** The Super Admin layout instantly syncs and displays registered users via a freshly minted `/api/admin/customers` endpoint. Everything updates in synchronized harmony.
